Advancing Geospatial Knowledge Infrastructure in World Economy & Society

Siva Ravada
Vice President of Development
Oracle Corp

Factors affecting advancement of GKI in World economy and society

- Geo-spatial is special (from technology side)
- Geo-spatial should not be special for end users
- Democratization of spatial data and services
- Transformation from National Spatial Data infrastructure to National Spatial Services Infrastructure
- Data is mainly consumed by GIS specialists, services are consumed by developers and end users
- Focus on "what problems can we solve with spatial infrastructure" instead of focusing too much on how to use the latest technology to solve problems
