

Future geospatial ecosystem stakeholders and their role in national development : Future Digital Ecosystem Perspective

Siva Ravada
Vice President of Development
Oracle Corp

What is a digital eco-system?

It is a network of interconnected digital technologies, platforms, and services.

It is composed of software, hardware, data, and people that work together to facilitate collaboration among various customer applications.

Role of digital/IT industry in making geospatial knowledge accessible to users

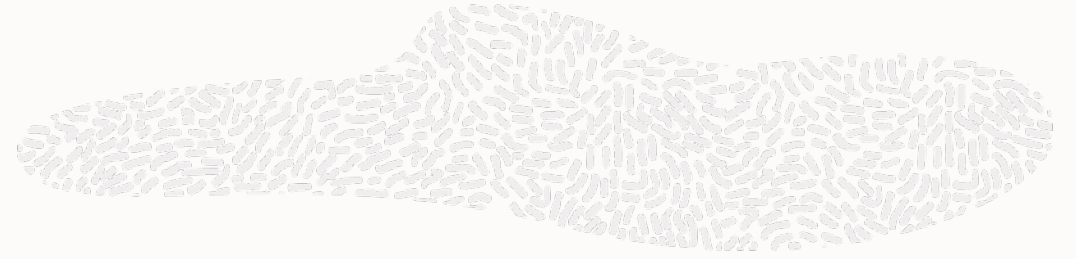

Lower the barrier for accessing the geospatial knowledge.

Build interoperable service oriented solutions.

Enable Developer community.

Collaboration is important

Enables data sharing

Enables interoperability between different software modules

Cloud based technology provides all the building blocks necessary to build the service oriented platform for GKI
