Our PhD Program

Since 2003:

- 32 active
- 46 completions

(Employed equally by industry, government, universities)

The Australian Spatial Landscape

- **GDP** growth of around 2.5% in 2014 (around world average)
- **Debt:** Federal Government debt levels low by international standards (<30% of GDP)
- **Productivity** flat and of real concern to government and industry
- **Strategy:** Both the Business Council of Australia and the Chief Scientist calling for a national strategy, especially for STEM, and to also address education and skilled capacity building
- Increased interest from Government in having Australia retain '**indigenous capability**' especially in GNSS and EO.
- **The 'Open' agenda** is driving Australian government to redefine their role in data production and management. They will do less creation, blend much more data with industry and community, focus more on standards, accept volunteered data, and contemplate more targeted regulation
- Increased tension between the 'open' agenda versus privacy and cyber security
- Impact of commoditisation
- **BuildingSmart** calling on the Australian Government to mandate use of BIM's for building and planning
- **Collaboration:** Australian businesses that collaborate are 55% more likely to report increased productivity (Australian Innovation Systems Report, 2012)

Recent Australian Policy Developments

- National Space Utilisation Policy (2013)
- National Positioning Infrastructure (2013)
- Space Community of Interest (commenced February 2014)
- Industry Innovation and Competitiveness Agenda (2014)
- Earth Observation Strategy (under development)

Drivers

Technology Drivers

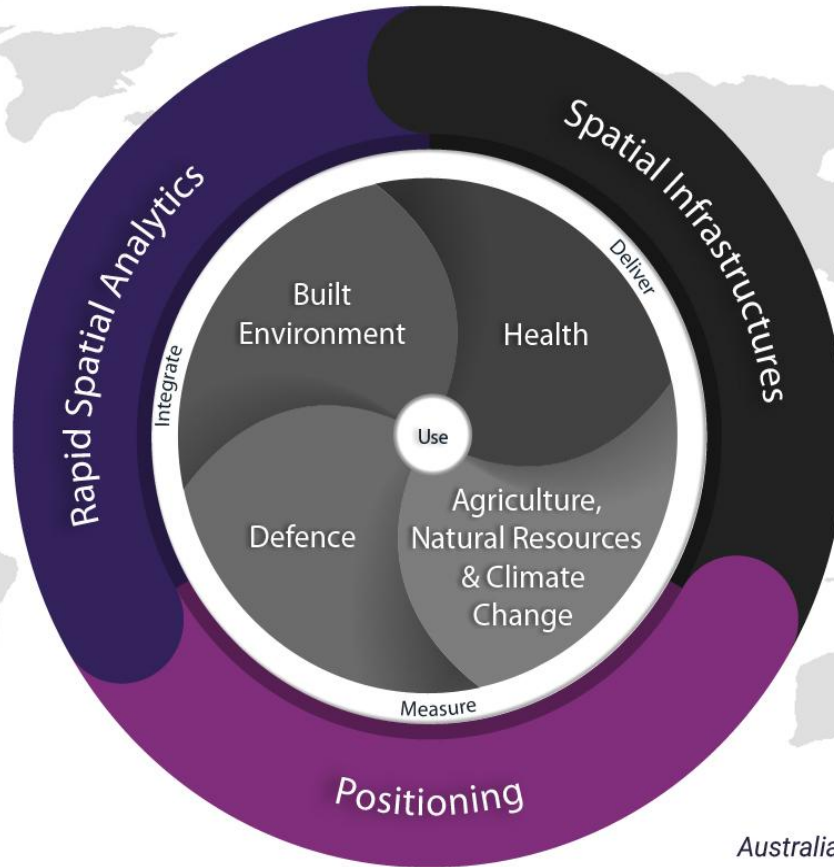

- Global Navigation Satellite Systems growth*
- Satellite imaging growth*
- Web 3.0 semantic web*
- 3D and 4D fully topological and metric
- Digital Earth (Virtual reality) *
- Geolocation (Location Intelligence) *
- Sensor web and RFIDs (Internet of things)
- UAVs

Policy Drivers

- Open source, open access, open standards, open data*
- Government out sourcing *
- Space policy *
- Broadband

*CRCSI activity

All disruptive
All capable of leading to productivity increases

Australia and New Zealand

CORS infrastructure operated by government & industry providers across Australia

9% of Australia

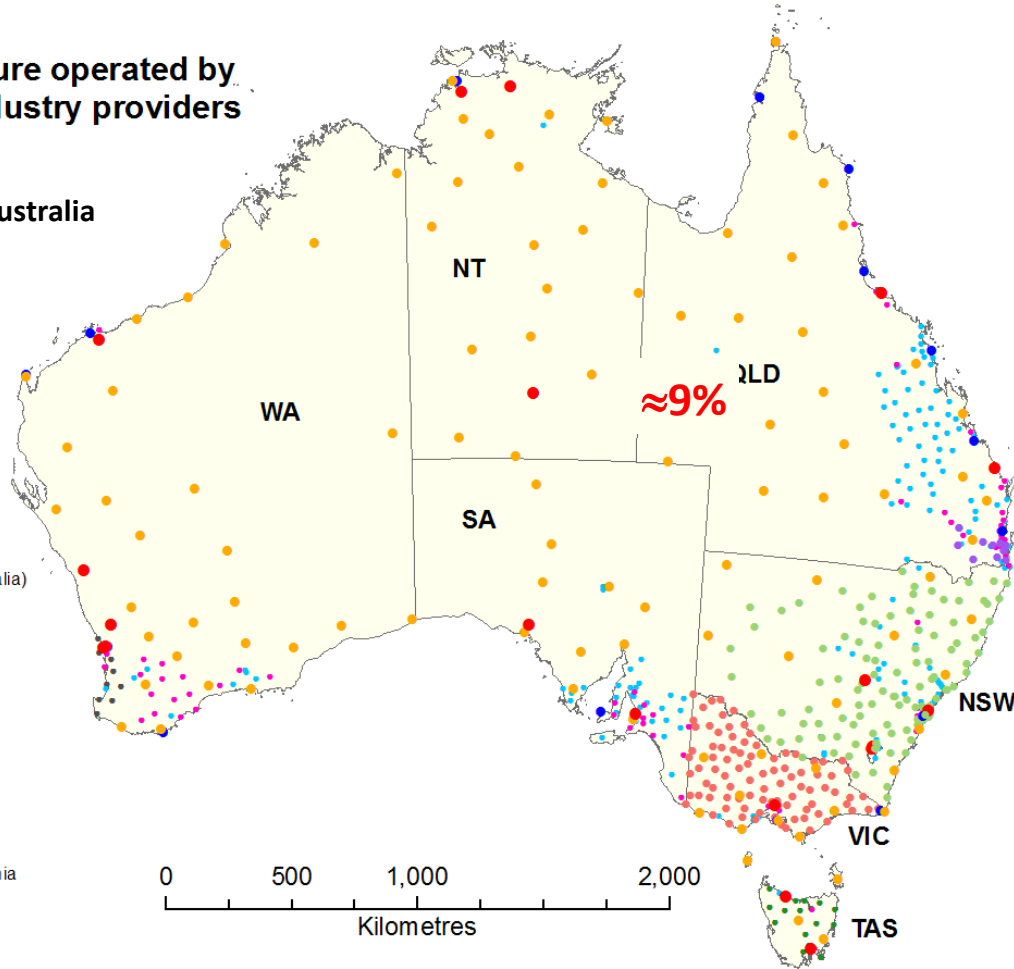

January 2015

Government Providers

- ARGN (Geoscience Australia)
- AuScope
- AMSA
- CORSnet NSW
- DERM SunPOZ
- DSE GPSnet

Industry Providers

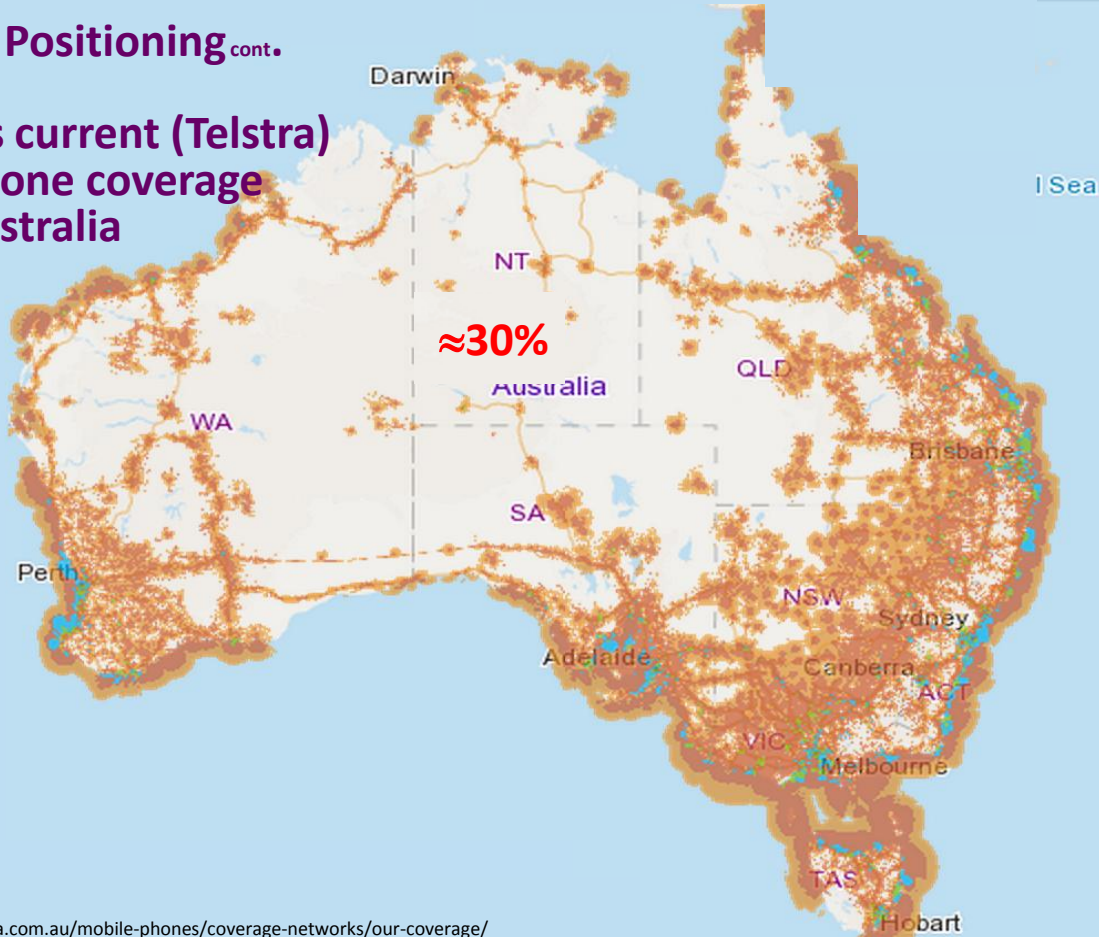

- AllDayRTK
- OmniSTAR CORS Tasmania
- RTKnetwest
- SmartNet

Spatial Infrastructure: Priority Areas

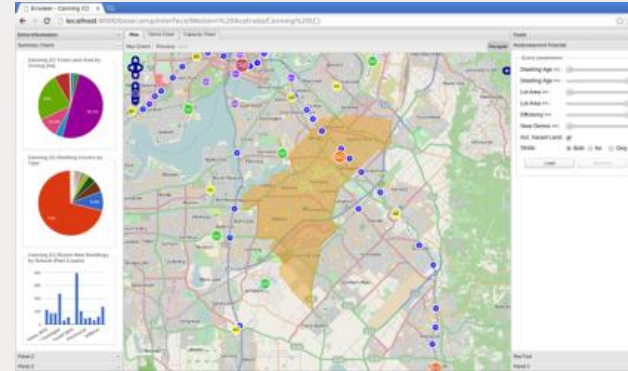

Urban Redevelopment: Greening the Greyfields

Objectives:

- Develop a set of strategies and decision making tools for urban planning
- Delivers enhanced economic, social and environmental outcomes for urban regeneration in the middle suburbs

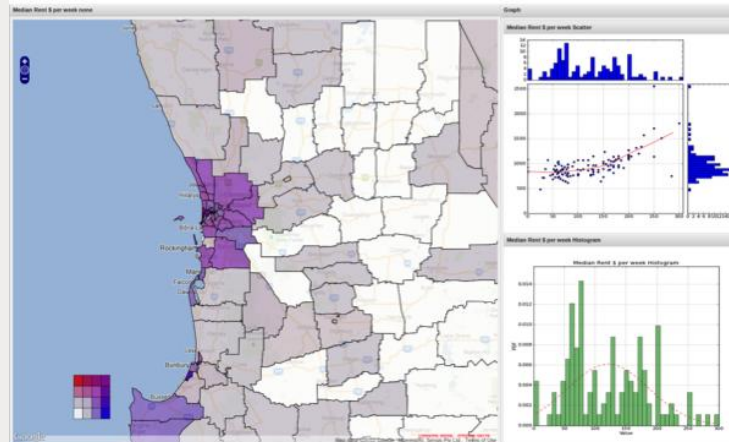

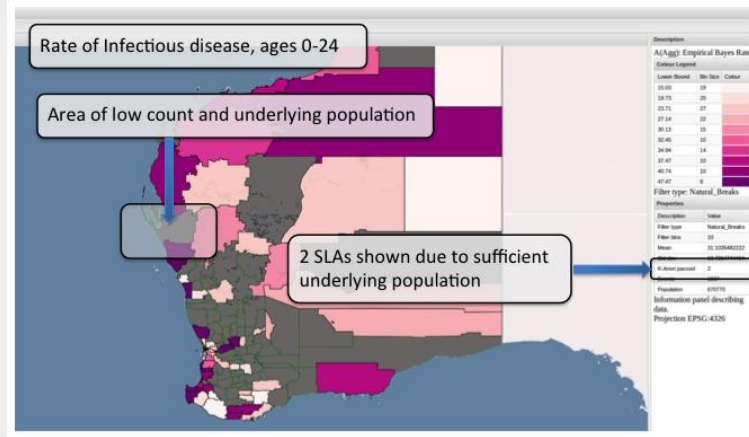

Four modules:

1. Spatial understanding of Australian urban economics
2. Shared urban spatial information platform
3. Visualisation tools to assess precinct level greyfield re-developments
4. Community engagement tools for regenerating greyfields
5. ENVISION analysis tool being adopted by governments across Australia and New Zealand

Health: Access to crucial population health data

HealthTracks and Epiphaneae

Infrastructure Capture – Powerline Flight Assist System

- CRCSI developed technology enables efficient, accurate capture infrastructure from planes
- Achieves what a pilot can not
- Gave rise to the world's largest routine data capture program of powerline network (150,000km pa)
- Game changer – previously to fly 1/20th of this took days to plan, weeks to capture, months to process and analyse is now completed within 24 hrs
- System on track to save Ergon Energy \$14M pa (reference Ergon CEO "The Australian" 17 Sept 2013)
- Technology licensed globally and spin off process well advanced

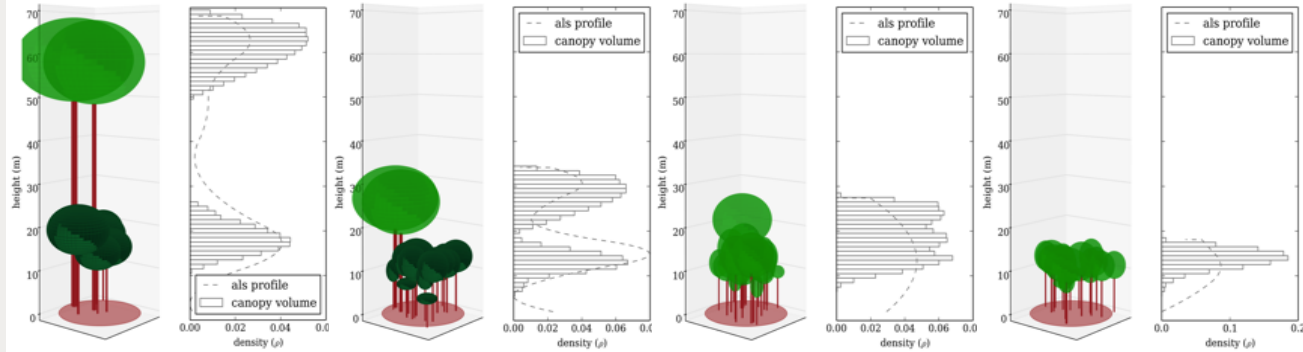

Objective: Sustainable pasture and rangeland management

Caring for Our Country Program
 Meat and Livestock Australia (MLA)
 Queensland Government
 All NRM Regional Bodies.

Stage 1 funded for 2yrs (Mar 2014-16).
 \$1.6m cash and \$2.8M in-kind

Canopy height profiles

Canopy height profiles from Airborne LiDAR data and forest inventory measurements.

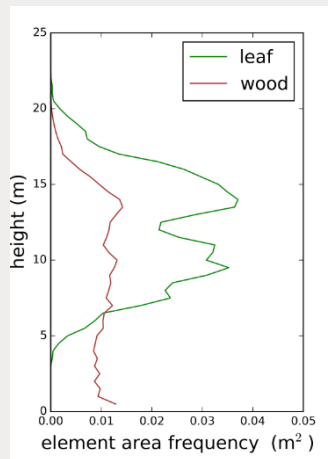

Key result: an automated approach to estimate canopy layers; position and density from airborne LiDAR. Will lead to the creation of a tool kit for widespread operational use.

P 2.07 : Uncertainty in key vegetation products

Rushworth forest, Victoria

Simulated upward-looking hemispherical photo

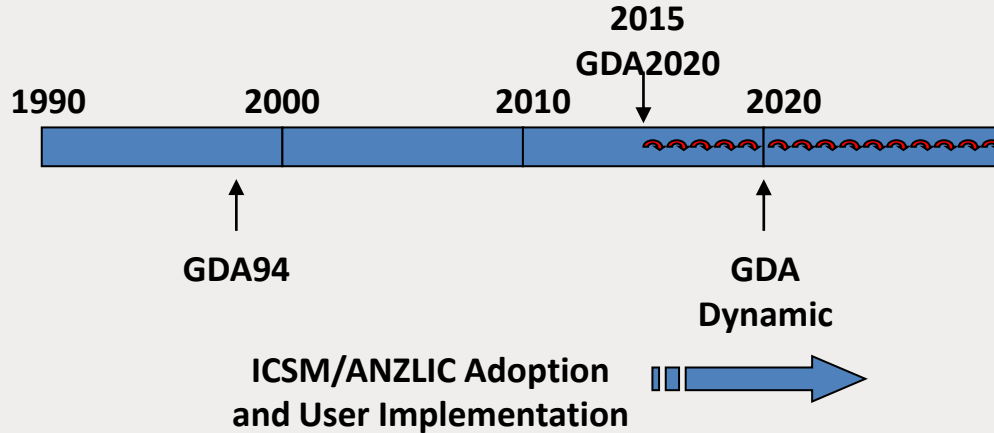

Foliage and wood plant volume density

A New Australian Datum

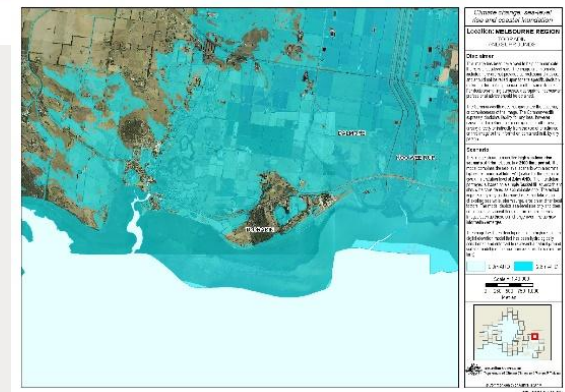

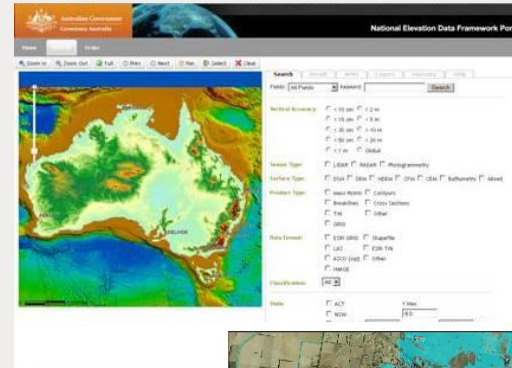

Datum:

- Updated continuously as new observations are contributed and blunders detected
- Supports the continuous update of the national Geoid model
- Supports time-based corrections (i.e. deformation models)
- Has tools and services that facilitate its use by the mass-market
- To be known as ITRF2013

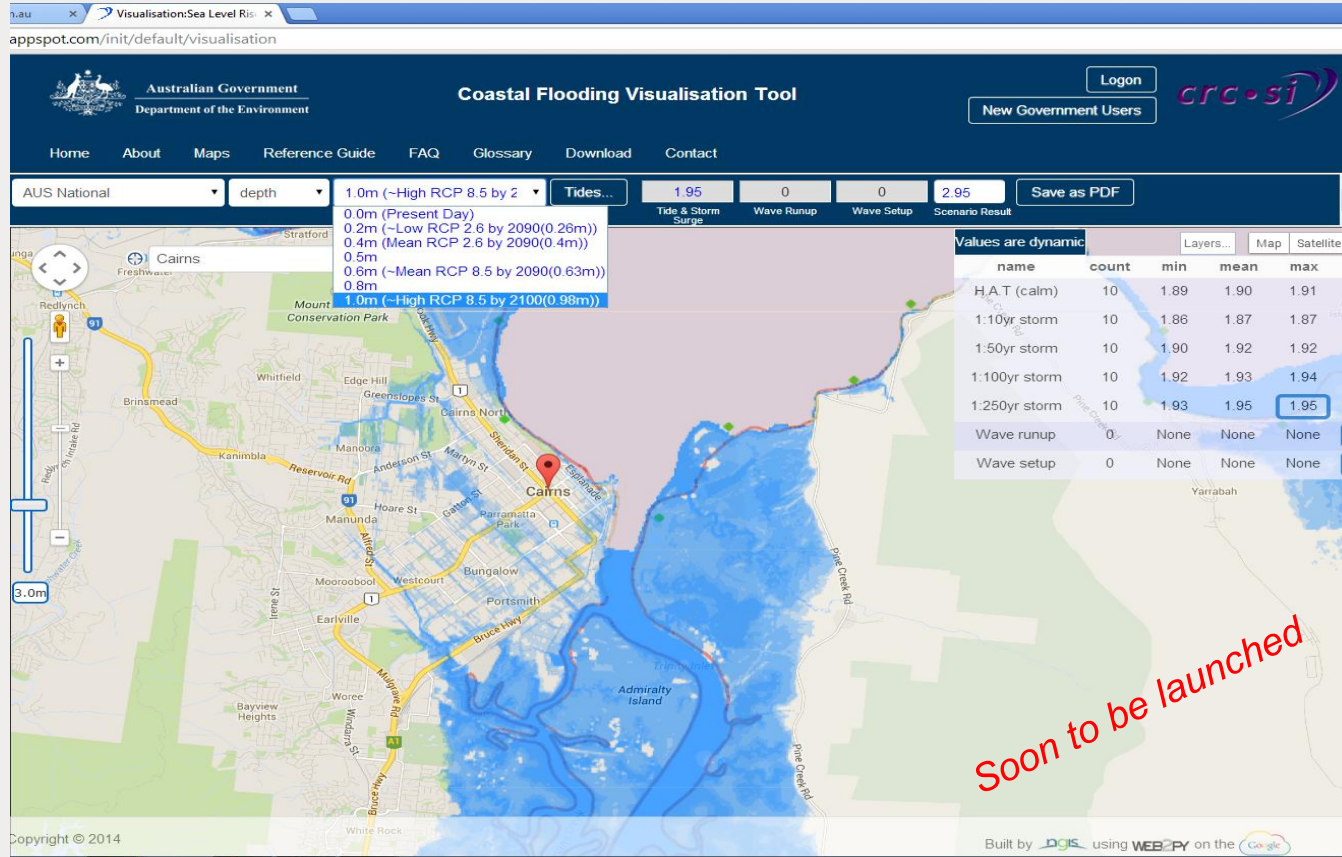

Partnerships: National Elevation Data Framework

- **National Priority** – Coalition of Australian Governments
- **Coordinated national approach** for acquisition and distribution
- **Applied research** into acquisition, integration and analysis
- **Development of tools** for analysis and visualisation systems
- **Data portal** for data and derived products – 300,000 pdf downloads over 4 years (via Geoscience Australia website)
- **Online sea-level rise visualisation tool**
- **National guidelines** for collection and processing of data
- **200,000 km² of 15cm DEMs** covering 80% of Australia's pop

The Coastal Flooding Visualisation Tool

- Over the last 5 years the standard has led to a dramatic improvement in data quality, interoperability, reduced investor risk and increased industry efficiency
- The Specifications have provided the basis for new automated tools for testing compliance and quality assurance (LiDAR QA) and a new tool has been developed (QA4LiDAR)

Pacific-Australia Climate Change Science and Adaptation Planning (PACCSAP) Programme

1. LiDAR acquisition
2. Building tailored hardware and software
3. Comprehensive training program tailored to each country
4. Developing a initial coastal risk assessment reports for all survey areas

Significant insights and lessons for future programs
