

Geo4SDGs: Geospatial Tools and Platforms Serving Economic Growth & Social Prosperity

Creative use of land administration technologies, processes, and financial approaches can help move the needle in achievement of the land-related SDGs.

To achieve the land administration-related SDGs, we need to collect a lot more data in a lot less time.

Source: Christaan Lemmen

The next generation of land administration systems requires technological and financial innovation.

Key Success Factors

- Increased flexibility
- Increased scalability
- Increased extensibility
- Additional funding mechanisms
- More holistic project approaches
