# Remotely Sensed Data in Support of Local Sustainable Development Projects

GEOSPATIAL WORLD FORUM | AMSTERDAM, THE NETHERLANDS | APRIL 2, 2019

**ANNE HALE MIGLARESE**

FOUNDER & CEO

# Vision & Mission

- ▶ Open Geospatial Data for Positive Global Impact
- ▶ Connecting people globally to Earth Imagery, geospatial data, tools and knowledge to meet the world's most critical challenges

# Why we exist

## Problem

1 DISCOVERY

2 COMPLEXITY

3 COSTS

Global  
Development  
Community needs  
data and tools but  
often has the least  
access to it

## Opportunity

- Increase in imagery and tools
- New technologies such as machine learning and cloud computing

## Our Solution

**Facilitating access** to  
imagery and data analytics  
to **enable the global  
development** community  
to address challenges

# Mission Critical Support

Radiant Earth  
Foundation

Global Health

Humanitarian  
Response

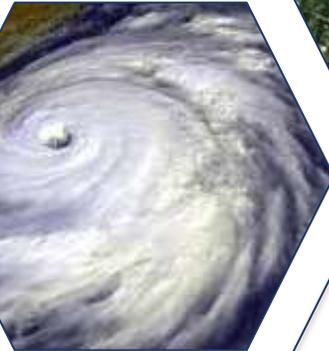

Conservation,  
Forestry &  
Environment

Transparency &  
Journalism

Food Security &  
Agriculture

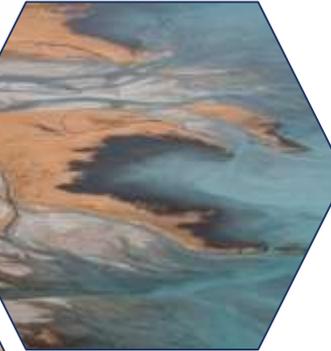

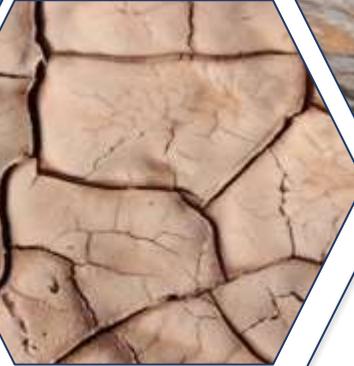

Poverty  
Reduction

Property Rights

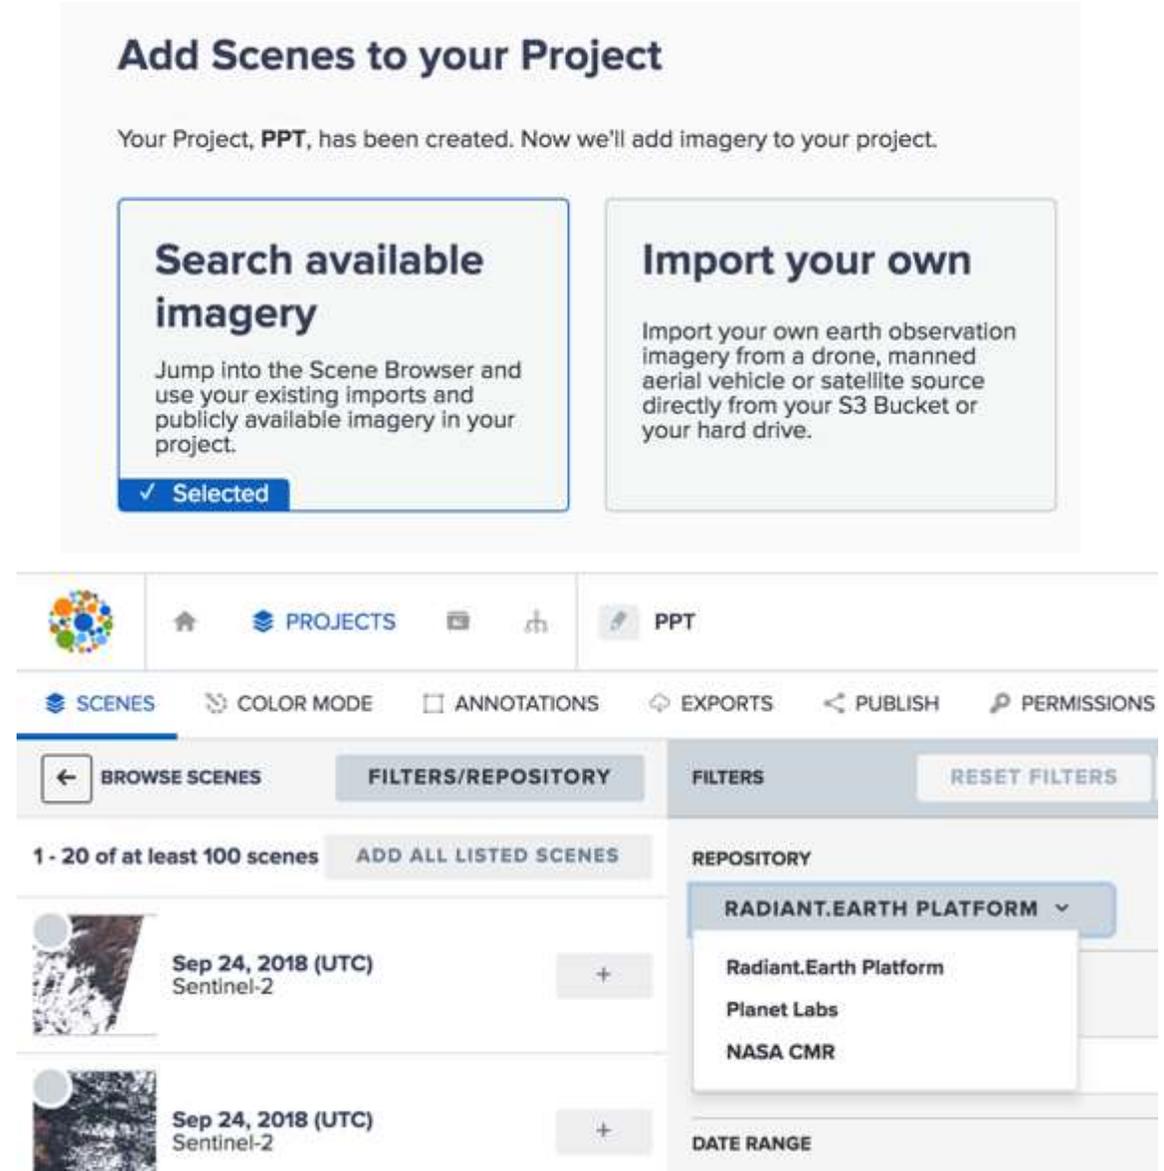

Water

Climate Change

# Platform Features

- ▶ Supporting any imagery type:
  - ▶ Satellite
  - ▶ Drone
  - ▶ Airborne
- ▶ Uploading pipelines:
  - ▶ Local
  - ▶ Dropbox
  - ▶ Amazon Web Services (AWS) S3 Bucket
  - ▶ Planet API Connection
  - ▶ Radiant Earth Foundation API

**Add Scenes to your Project**

Your Project, **PPT**, has been created. Now we'll add imagery to your project.

**Search available imagery**

Jump into the Scene Browser and use your existing imports and publicly available imagery in your project.

✓ Selected

**Import your own**

Import your own earth observation imagery from a drone, manned aerial vehicle or satellite source directly from your S3 Bucket or your hard drive.

Navigation: SCENES | COLOR MODE | ANNOTATIONS | EXPORTS | PUBLISH | PERMISSIONS

Project: PPT

1 - 20 of at least 100 scenes | ADD ALL LISTED SCENES

Thumbnail	Metadata	Action
	Sep 24, 2018 (UTC) Sentinel-2	+
	Sep 24, 2018 (UTC) Sentinel-2	+

Repository: RADIANT.EARTH PLATFORM

- Radiant.Earth Platform
- Planet Labs
- NASA CMR

DATE RANGE

# Available Open Imagery

Radiant Earth  
Foundation

Datasource	Temporal Coverage	Temporal Revisit	Spatial Resolution
Sentinel 2-A/B	2015 - present	5 days	10 m
Landsat 4/5/7/8	1982 - present	16 days	30 m
MODIS	2000 - present	8 day composite from daily	250 m
ISERV	2012 - 2015	Specific operation times	3.5 m

# EO Importance for the SDGs

Earth Observations potential contribution to the SDG Targets and Indicators

## SDGs with most opportunities for EO data

Analysis performed by the GEO EO4SDGs initiative

Target		Goal	Indicator	
<i>Contribute to progress on the Target yet not the Indicator per se</i>			<i>Direct measure or indirect support</i>	
1.4	1.5	1	1.4.2	
2.3	2.4	2.c	2.4.1	
3.3	3.4	3.9	3.9.1	
		5.a	5.a.1	
6.1	6.3	6.4	6.5	6.6
6.a	6.b	6.3.1	6.3.2	6.4.2
6.5.1	6.6.1			
7.2	7.3	7.a	7.b	
		8.4		
9.1	9.4	9.5	9.a	
9.1.1	9.4.1			
10.6	10.7	10.a		
11.1	11.3	11.4	11.5	11.6
11.7	11.b	11.c	11.1.1	11.2.1
11.3.1	11.3.1	11.6.2	11.7.1	
12.2	12.4	12.8	12.a	12.b
			12.a.1	
13.1	13.2	13.3	13.b	
			13.1.1	
14.1	14.2	14.3	14.4	14.6
14.7	14.a	14.3.1	14.4.1	14.5.1
15.1	15.2	15.3	15.4	15.5
15.7	15.8	15.9	15.1.1	15.2.1
15.3.1	15.4.1	15.4.2		
		16.8		
17.2	17.3	17.6	17.7	17.8
17.9	17.16	17.17	17.18	
			17.6.1	17.18.1

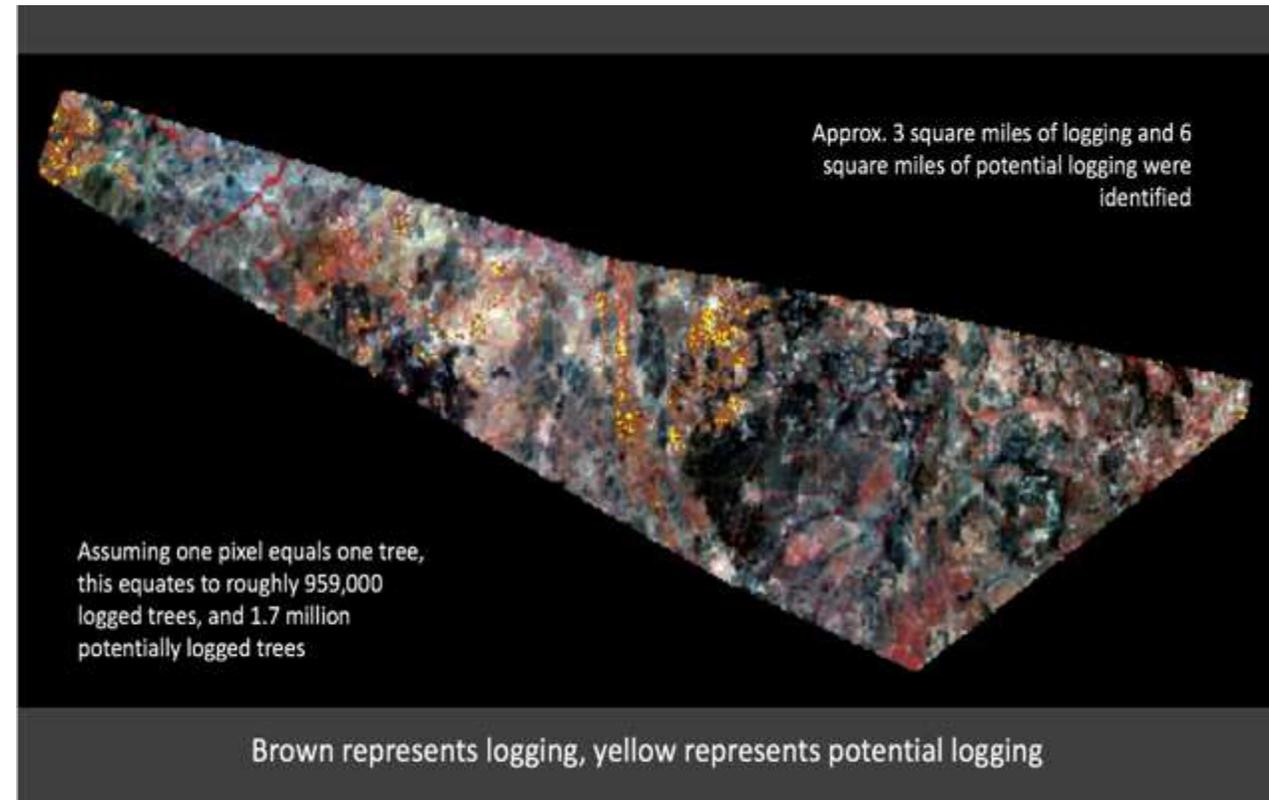

## Sanitation Team at Bill & Melinda Gates Foundation

- ▶ Independent estimates of sewage processing operations in developing countries are needed to monitor and verify SDG 6.
- ▶ We built and tested two models using Sentinel 1 (3 locations) and Sentinel 2 (2 locations) open source satellite imagery with a machine learning technique.
- ▶ We concluded that the spatial and temporal resolution of available open imagery demands a larger amount of training data to improve the model fit. Alternate locations offering less cloud cover and more training data is recommended.

- ▶ Radiant Earth Foundation provided analytic support to reporters from the Pulitzer Center for Crisis Reporting.
- ▶ Using high-resolution imagery, journalists sought to corroborate reports of illegal logging on the South Sudan/Uganda border.

## Problem: Deforestation and illegal Mining in Venezuela's Canaima National Park

- ▶ Illegal mining activity and deforestation in Amazonas and Orinoco regions of Venezuela, resulting in biodiversity loss and endangering health of indigenous populations
- ▶ Remote area making travel difficult and dangerous for investigation

## Solution

- ▶ Radiant Earth set up a workspace on SOS Orinoco's platform, and facilitated access to satellite allowing analysts to examine and corroborate the reports of destruction

## Benefits / Impact

- ▶ Raised the visibility of ecological and public health damage
- ▶ Educated journalist, politicians, activists and the public on the impact of the damage

### Problem

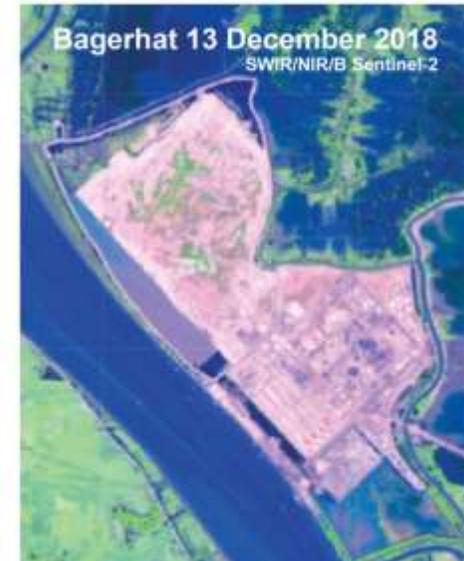

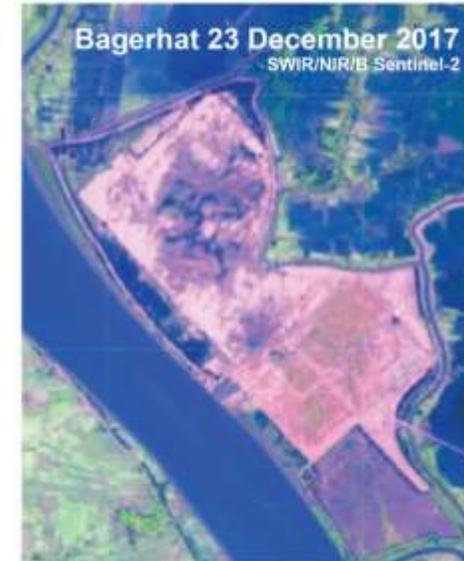

- ▶ The request to halt construction was placed by the UNESCO World Heritage Committee and the International Union for Conservation of Nature (IUCN)
- ▶ Earthjustice sought to determine whether the Government of Bangladesh halted construction of coal plant at Rampal, near the Sundarbans World Heritage site

### Solution

- ▶ Radiant Earth analyzed satellite imagery from 2016-2018 of the site, and observed changes to the infrastructure present, filling of wetlands.

### Benefits / Impact

- ▶ EO evidence confirmed ongoing construction of the coal plant. Report with Radiant Earth's analysis was submitted to the World Heritage Committee and IUCN

# Malaria Program in Nigeria

## Problem: 30 M Bed Net Distribution Program

- ▶ Nigeria-- highest Malaria burden globally
- ▶ Population distribution not captured by maps.

## Solution

- ▶ Radiant.Earth houses BMGF settlement databases.
- ▶ Up-to-date high resolution imagery, village boundaries, transportation networks and population estimates.

## Benefits / Impact

- ▶ Significant staff time and money saved
- ▶ CRS able to distribute bed nets to targeted communities faster and more accurately
- ▶ Increased percentage of all communities served, due to this provision of data
- ▶ 3.3 mil bed net vouchers distributed

# Using SIF to Analyze Monkey Pox Vector Habitat Change in Democratic Republic of Congo

- ▶ Solar induced fluorescence (SIF) is a direct measure of photosynthetic activity of plants in contrast to NDVI which is a greenness index.
- ▶ This methodological study will determine the relative suitability of these two measures to assess habitat change of the monkeypox vector(s).

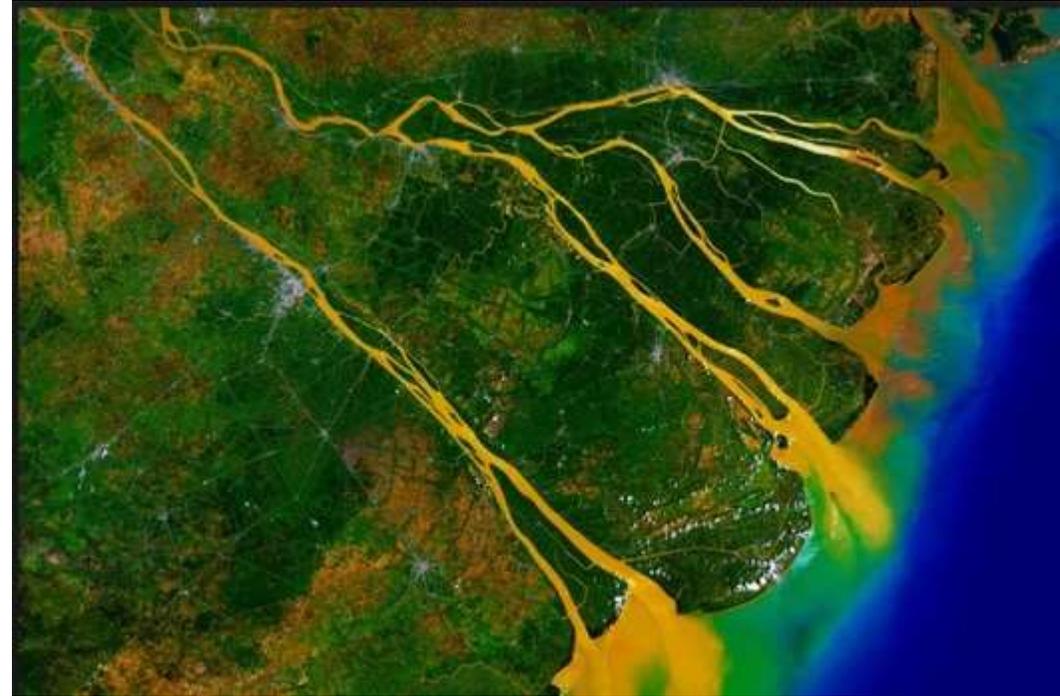

Forest is a suitable habitat for malaria vectors in tropical regions. Using Synthetic Aperture Radar (SAR) measurements from Sentinel-1 satellite, we

- ▶ developed a data pipeline to process Sentinel-1 imagery at scale
- ▶ developed (a) random forest and (2) convoluted neural network models architecture and training data generation

## Next steps

- ▶ Improve U-Net training with more samples.
- ▶ Optimize U-Net architecture and training parameters based on the results from new samples.

## Forest Mapping in Tropical Regions

Malaria Program, Bill & Melinda Gates Foundation

## South Africa and Mozambique

Radiant Earth Foundation provided **satellite imagery** and **analysis of the built environment** to assess community compositional changes to Oxpeckers journalists investigating land-seizures along the Mozambique - South Africa border.

**OXPECKERS**  
Investigative Environmental Journalism

# Supporting the Health of Artisanal and Small-Scale Miners in Cameroon

- ▶ Small scale mining is an unregulated industry, and it can pose a number of environmental and occupational hazards
- ▶ Monitoring and regulation of industry difficult
- ▶ Radiant Earth streamlined the survey process by supporting the design of a mobile phone-based survey application using Open Data Kit, which integrates the survey, geospatial and image data.
